TECHNICAL SKILLS

- C programming
- C++
- Java Programming
- Data Structures
- Full Stack Technologies
- DBMS(SQL+)
- Python
- Problem Solving

EDUCATION

**MLM Mamallan Matriculation
Higher Secondary School,
Kanchipuram-631501**

SSLC completed in 2021

HSC completed in 2023 with 97.3
percentage

Anna University,M.I.T Campus

BE Computer Science and Engineering
Expected Graduation in 2027

CGPA: 8.6/10(as of 5th sem)

INTERNSHIP

AIML Engineer Intern at Giggso

Duration :4 th June to 30th June 2025

SOFT SKILLS

- project Manager
- Leadership Skills

PROFILE SUMMARY

Motivated and detail-oriented Computer Science engineering student with a strong foundation in programming and software development. Proficient in C, C++, and Java, with a solid understanding of Database Management Systems (DBMS). Skilled in full stack development, combining both front-end and back-end technologies to build responsive and user-friendly web applications. Eager to apply academic knowledge and technical skills in a real-world environment through an internship opportunity. Known for quick learning, problem-solving ability, and a collaborative approach to teamwork.

PROJECTS

• Universal Decentralized Agentic Federated Learning Platform.

Programming Language:Python,solidity(blockchain)

Engineered a Decentralized Federated Learning Platform using blockchain and PyTorch. Integrated differential privacy and simulated homomorphic encryption for secure training. Deployed Solidity smart contracts to manage node registration and global model state. Architected Trust and Healer agents to monitor events and recover anomalous models. Built a Streamlit dashboard to visualize real-time training metrics and node health

• Expense Tracker

Programming Language:Java programming

Developed a Java based Expense Tracker application by integrating with JDBC for managing and maintaining the day to day expenses by adding,removing,calculating total expenses.This application is a user convenient where user can operate on ease with this application.

• Cricket Fantasy Web Application

Programming

Language:React.js(frontend),Express.js(backend),MongoDB(Database), Node.js

Developed a Full Stack cricket fantasy web application that enables users to create virtual cricket teams,select players,track match performances .

The platform simulates the fantasy sports experience based on real or simulated match data

• Student Management System(CRUD APPLICATION)

Programming Language:HTML,CSS,JS(frontend)+oracle SQLplus(backend)

Developed a web based student management system with CRUD operations on student records.Managed backend data using oracle SQLplus queries,procedures and triggers.
